

**ABSTRACT**

The present invention relates to a guiding installation for training horses, camels, and other animals without a person guiding the animals. The guiding installation is provided with a travel rail positioned at a distance over a training circuit of the guiding installation and a guide grating traction suspended from the travel rail. The guide grating traction may be provided with 10 at least one drive carriage and a plurality of runner carriages or a plurality of drive carriages. The guiding installation is additionally provided with a plurality of guide gratings which are suspended from the runner carriages and/or drive carriages.
